**SpeediCath**

# Security is freedom

## A small revolution for women who self-catheterise

Many women who self-catheterise have long wished for a more convenient, discreet catheter; a catheter that can be used easily and safely both inside and outside the home environment. **SpeediCath Compact** is Coloplast's solution to this need.

**SpeediCath Compact** is a hydrophilic-coated, sterile intermittent catheter for single use. It is packaged in saline solution and is ready-to-use right out of the pack.

## Tailor-made for women

The female urethra on average is just 3-5 cm long – significantly shorter than the male urethra. With a catheter length of 7 cm, **SpeediCath Compact** is tailor-made for the typical female anatomy. In a clinical study, **SpeediCath Compact** was documented to be at least as efficient at emptying the bladder<sup>1)</sup> as a conventional female catheter with a length of 15-20 cm.

## Ready-to-use

**SpeediCath Compact** eliminates concerns over catheter preparation and quality of the hydration source. The catheter comes pre-hydrated in a ready-to-use package, it could not be easier to use. Simply break the seal and pull open the telescopic packaging - the catheter is ready to insert.

## Easy and hygienic to insert

**SpeediCath Compact** supports hygienic non-touch insertion. The catheter is fitted with an easy-grip handle that keeps fingers safely away from the sterile part of the catheter and improves user control during insertion thereby reducing catheter contact with the septic environment.

## Discreet

**SpeediCath Compact** provides added discretion for the catheter user. When un-opened, the catheter package is no larger than a lipstick. This ingenious packaging design makes the catheter extremely discreet – without compromising performance.<sup>1)</sup>

## Free of PVC and phthalates

**SpeediCath Compact** is 100% PVC-free and therefore does not contain DEHP or other phthalates. The risk of harmful consequences to the environment is thereby reduced compared to PVC-containing catheters.
